

TREATMENT PROPOSAL

Patient: Aleksey Kuznetcov
Budget No.: 2020-357
Department: Oncology
Specialist: Dr. Jaume Mora
Diagnosis: Neuroblastoma

The medical reports of Aleksey have been studied by the scientific director of the Oncology and Hematology Department of the Hospital Sant Joan de Déu, Dr. Jaume Mora.

Aleksey is a 3 years-old patient affected with high risk neuroblastoma. The evaluation and treatment plan proposed by Dr. Mora at the arrival to our hospital is the following:

1. Complete oncologic evaluation to confirm diagnosis. Examination of paraffin blocks, which the parents have to bring with themselves. The results of evaluation will determine the following treatment.
2. Chemotherapy
3. Omburtamab protocol
4. Immunotherapy with hu3F8 antibody (4 cycles)
5. Maintenance chemotherapy

Always keep in mind that the results of the diagnostic assessment will determine the possibility to continue with the proposed treatment. The present plan of treatment can change depending on the results of the diagnostic assessment and patient's health condition.

The budget includes evaluation, Chemotherapy treatment, omburtomab, immunotherapy, maintenance chemotherapy and interpreter services. The budget does not include accommodation.

During the treatment the patient has to stay in Barcelona approximately for 12 months.

**PROPOSAL OF TREATMENT OF HIGH-RISK NEUROBLASTOMA WITH
IMMUNOTHERAPY**

Patient: Aleksey Kuznetcov

Proposal No: 2020 – 357/D

Hospital Department: Oncology

Specialist: Dr. Jaume Mora

Diagnosis: High-risk Neuroblastoma

The clinical reports from patient Aleksey Kuznetcov have been evaluated by Dr. Jaume Mora, Scientific Director of the Department of Pediatric hematology and Oncology of our hospital.

The patient must under all circumstances undergo the diagnostic evaluations in our hospital. The proposal of treatment with immunotherapy will be offered upon consideration of the results and following the immunotherapy protocols established and carried out at Sloan-Kettering Memorial Cancer Center in New York.

The proposal includes:

Period of treatment with immunotherapy: 93.742,00 €

The treatment protocol with the antibody anti-GD2 hu3F8 and GM-CSF consists of:

- four cycles of treatment. One cycle every four weeks.
- Every cycle will consist of the administration of the antibody hu3F8 together with GM-CSF (Sagramostin; Leukine[®]). The treatment will be administered on an outpatient basis in the day hospital (special procedures unit), with admissions to the hospital necessary only to control symptoms in case of complications.
- Disease evaluation will be performed every two cycles, including bone marrow studies and an MIBG.

Please note that in this document, the quoted price corresponds to 4 cycles. The rule to decide how many cycles each patient should undergo is as follows: **from the moment the patient has started immunotherapy treatment and reached complete remission, five cycles of immunotherapy will be conducted.**

 **SJD**
Sant Joan de Déu
Barcelona · Hospital
INSTITUT PEDIÀTRIC

The estimated duration of all 4 cycles is 5 months.

In summary, the proposal of treatment at this time includes:

- Adjuvant medication in accordance with protocol
- Imaging tests to monitor the treatment
- Hospitalization stay of maximum 7 days in case of potential complications.
- Follow-up blood tests in accordance with the protocol
- Day clinic sessions (Special procedures Unit) to administer the treatment and following check ups to a maximum of 12 during the 7 cycles.
- Medical consultations including control and monitoring visits at the inpatient unit and day hospital (Special Procedures Unit).

Treatment cost considerations:

To begin the process of care in our center (that is, the diagnostic confirmation phase, evaluation of the extent of the disease, and evaluation of the state of the patient) an initial deposit of the full amount indicated in this proposal is needed.

If upon arrival to the hospital there is an available clinical trial addressing the type of cancer that the patient is diagnosed with and the patient is shown to meet the qualifying criteria of entry to the trial, the hospital will return part of the monetary deposit paid corresponding to the financial coverage of the clinical trial in accordance with current international regulations once the patient has been discharged from the pathology for which the patient came to the hospital.

Any other provision necessary or hospital stay required as a result of treatment complications that exceed the maximum number of inpatient stays in this proposal shall be invoiced separately. The treatment proposal and the budget do not include any admission or stay in the Pediatric Intensive Care Unit (not expected) that might be necessary in case of complications associated with the administration of immunotherapy.

The treatment costs are regarded as a closed package of services (forfait), which cannot be split (that means, the price of each service is not specified and only the total amount is provided). The treatment costs include all the medical expenses related to the treatment.
